

FOR IMMEDIATE RELEASE

A GREEN Revolution in Windshield Washer Fluid

(TORONTO, March 3, 2010) LiquidXpress Solutions Inc. today unveiled a revolutionary approach to the distribution and dispensing of windshield washer fluid.

The patent pending *Refills Save Landfills Windshield Liquid Dispensing System* was officially unveiled at the Convenience U CARWACS show in Toronto, and offers Canadian businesses and consumers a green alternative to the way we have traditionally refilled our washer fluid.

The innovative self-serve design of the *Refills Save Landfills Windshield Liquid Dispensing System* allows consumers the option to directly fill their vehicle's washer fluid reservoir or to refill a reusable washer fluid jug at any participating gas station, car wash or retail outlet, virtually eliminating the need for disposable washer fluid containers.

"In this day and age of environmental consciousness, we all need to find ways to produce less waste, use less energy, and give back to the earth," said Ken Wakeman, President LiquidXpress Solutions Inc. "By eliminating disposable washer fluid containers, the Windshield Liquid Dispensing System substantially reduces waste, lowers carbon emissions and saves our landfills from millions of empty washer fluid containers each year, all while offering the consumer greater convenience in windshield washer refills."

The Refills Save Landfills Windshield Liquid Dispensing System offers a unique mix of benefits to businesses, consumers and the environment. By changing habits and attitudes towards the method in which Canadians refill their windshield washer fluid, LiquidXpress Solutions Inc. aims to reduce the cost to the automotive industry, reduce the handling of washer fluid waste by products, and reduce the amount of chemicals currently used in washer fluid.

"By addressing the impact of excessive packaging on our environment, and the additional cost this packaging creates for retailers and consumers, LiquidXpress Solutions Inc. is a solution for a greener tomorrow," added Wakeman. "Simply put, the Refills Save Landfills Windshield Liquid Dispensing system is better for business, better for consumers and better for the environment."

LiquidXpress Solutions Inc. is the manufacturer and full service distributor of the *Refills Save Landfills Windshield Liquid Dispensing System*, and bulk windshield fluid. LiquidXpress Solutions Inc. offers consumers an environmentally responsible and cost effective choice in windshield washer fluid, while offering retailers a solution that reduces the cost of handling, storage and disposal of washer fluid containers.
